/*

Javascript is a Synchronous language HOWEVER with NODE and Webbrower API It became Asynchronous!!!

What is Asynchronous and Synchronous?

The code below you can see that one is executed after the other and there. */

function first() { return "abc123"; }

function second() { return "456efg"; } first(); second();

/* Now look at this, althought runNowPrint2SecondsLater is executed first it didn't console.log right away. It took two seconds */

function runNowPrint2SecondsLater() { setTimeout(function () { console.log("I ran first but I printing 2 seconds later"); }, 2000); }

function runNowPrintRightAway() { console.log("printing...."); }

runNowPrint2SecondsLater(); runNowPrintRightAway();

function firstCall() { setTimeout(function () { console.log("first called but last to print"); }, 3000); }

function secondCall() { setTimeout(function () { console.log("second called but second to print"); }, 2000); }

function thirdCall() { setTimeout(function () { console.log("third called but first to print"); }, 1000); }

firstCall(); secondCall(); thirdCall();
